SECURITY FOR EONS

Seceon aiSecurity UIDGuard360

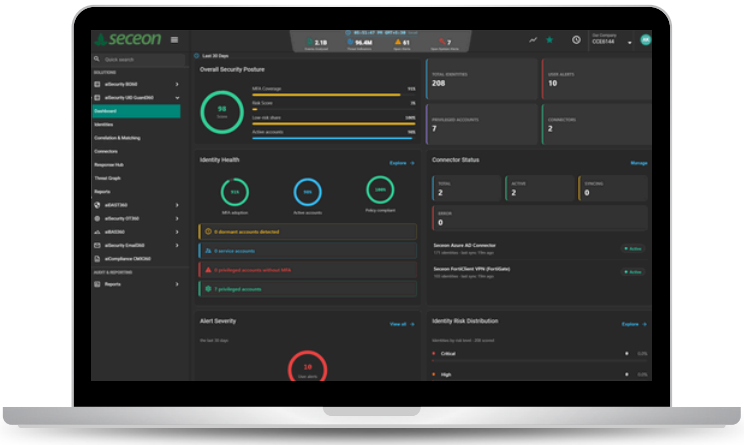
AI-Driven Identity Corelation, Threat Detection & Response

Universal identity correlation, risk scoring, and automated response for hybrid, multi-cloud enterprises.

Product Overview

Identity is the new perimeter, and attackers know it. **aiSecurity UIDGuard360** gives SOC and MSSP teams one unified, AI-correlated view of every identity across your hybrid enterprise, continuously scores risk, and automatically shuts down compromised accounts in seconds, not hours.

Every employee, service account, and app-based identity today is scattered across dozens of directories, cloud platforms, and SaaS applications, and each fragment is invisible to the others. **aiSecurity UIDGuard360** closes that gap by continuously resolving, scoring, and securing every identity before attackers can exploit the seams between systems, giving you one authoritative source of identity truth across the entire enterprise.



Get a real-time view of identity risk, account activity, MFA, compliance, and connected sources, all in one place.

Highlights

Identity 360 Correlation

Every fragmented account automatically resolved into one canonical identity per person.

Identity Threat Graph

Visualize access paths, blast radius, and privilege risk for any identity in one click.

Natural-Language AI Assistant

Ask identity questions in plain English — no SQL or graph syntax required.

6-Factor Risk Engine

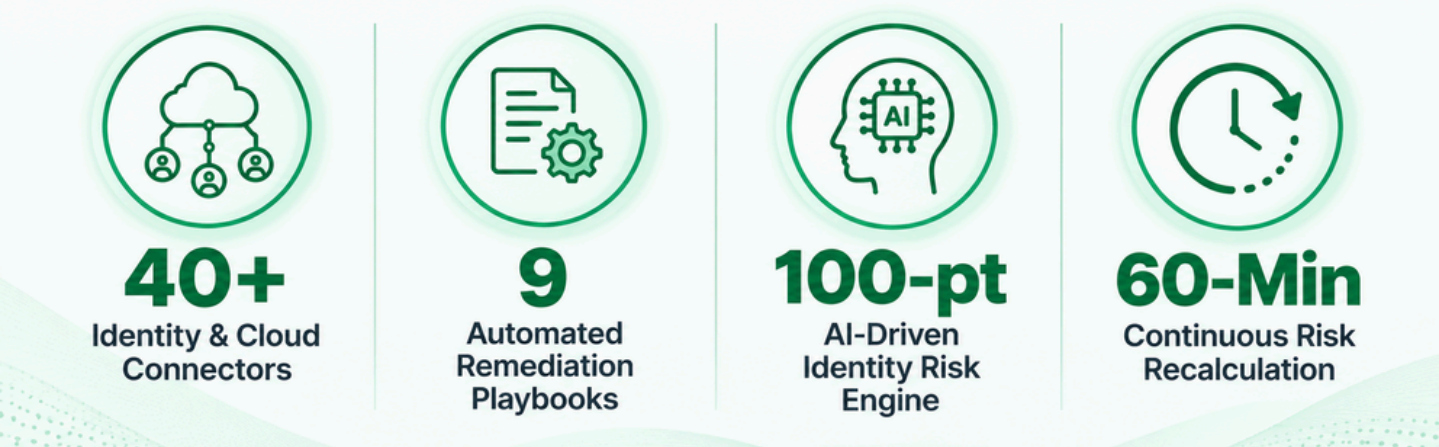
A continuous 100-point score across credential, privilege, activity, access, behavior, and compliance risk.

Automated Response Hub

9 pre-built playbooks contain compromised identities in seconds, not hours

40+ Connectors

Directory, IdP, cloud, network, PAM, SaaS, HR, database, and custom sources, out of the box.



The Identity Fragmentation Problem

The identity fragmentation problem

One person, dozens of disconnected identities, zero unified visibility

Model 1: simplistic

1 user = 1 account

User → account

Seen as separate entities:
jsmith, john.smith, js1234, smithj, AWS-Role-117, SAP-4567

- Manual correlation required
- Time to link: hours–days

Model 2: partial

User has a few accounts

User
↓
AD account
↓
Entra account
↓
Okta account

- Directory-connected only
- Misses SAP and databases

aiUIDGuard: complete

1 human = 20+ identities

John Smith
↓
AD · Entra · Okta
↓
SAP · Salesforce
↓
AWS IAM · Azure

All 20+ mapped automatically. Real-time. No analyst effort.

Traditional security tools see these as SEPARATE identities

Cross-platform attacks like impossible travel remain invisible

Why aiSecurity UIDGuard360

- **Stop credential attacks in real time:** detect impossible travel, MFA bypass, and credential stuffing the moment it happens, before attackers move laterally.
- **End identity sprawl:** automatically merge fragmented accounts across AD, Entra ID, AWS, Okta, and SaaS into one canonical identity, closing blind spots that shadow admins hide in.
- **Cut SOC response time from hours to seconds:** 9 pre-built playbooks auto-disable, lock, or contain risky identities without waiting on manual tickets.
- **Ask, don't query:** the built-in natural-language AI assistant answers identity questions instantly, no SQL or graph syntax required.

Platform Capabilities

- **Identity 360 Correlation:** deterministic + AI fuzzy matching (Levenshtein, Jaro-Winkler, phonetic) with confidence-scored merges and orphan/shadow-admin detection.
- **6-Factor, 100-Point Risk Engine:** Credential, Privilege, Activity, Access, Behavioral Anomaly, Compliance recalculated continuously.
- **Identity Threat Graph:** real-time, click-through visualization of apps, groups, access paths, and privilege risk per identity.
- **Automated Response Hub:** 9 playbooks including Critical Risk Account Lockdown, High Risk MFA Enforcement, Dormant Account Cleanup, and Privileged High Risk Response.
- **Identity Enrichment:** check identity details, associated applications, and compromised apps in a single click from any alert.

How It Works

aiSecurity UIDGuard360 resolves, scores, and secures every identity in your environment through a continuous five-stage workflow:

1. **Connect:** aiSecurity UIDGuard360 connects to your identity, directory, cloud, HR, and SaaS sources through 40+ pre-built connectors, pulling in every account tied to a person.
2. **Resolve:** Deterministic and AI-driven fuzzy matching merges fragmented accounts into a single canonical identity, closing the visibility gap between systems.
3. **Score:** A continuous 6-factor, 100-point risk engine recalculates every identity's risk in real time based on credentials, privilege, activity, access, behavior, and compliance.

3. **Detect & Correlate:** The Identity Threat Graph and Seceon APE correlate signals across sources to surface high-risk identities and rank the riskiest accounts first.
4. **Respond**: Nine automated playbooks in the Response Hub disable, lock, or contain compromised identities in seconds, with analyst approval where required.

Integration Ecosystem

aiSecurity UIDGuard360 ships with 40+ turnkey connectors spanning directory, identity, cloud, network, privileged access, SaaS, HR, and database sources:

Category	Connectors / Integrations
Directory	Active Directory, Azure AD Domain Services, LDAP, OpenLDAP
Identity Provider	Okta, Azure AD, Google Workspace, OneLogin, Auth0, Ping Identity, JumpCloud, Duo Security, ForgeRock
Cloud	AWS IAM, AWS IAM Identity Center, Azure RBAC, Google Cloud IAM, Oracle Cloud, Alibaba Cloud, IBM Cloud
Network	Cisco Secure Client / VPN, Zscaler ZPA / ZIA, Fortinet VPN / FortiClient
PAM	CyberArk, BeyondTrust, HashiCorp Vault, Delinea, SailPoint, Saviynt
SaaS	Salesforce, ServiceNow, Generic ITSM, Workday, SAP, Zendesk, Slack, Microsoft 365, Microsoft Intune, Microsoft Defender for Identity, Microsoft Teams, Netskope, Proofpoint, Zoom, Box, Dropbox, GitHub, GitLab, Atlassian, DocuSign
HRIS	SAP SuccessFactors
HR	BambooHR, ADP, UKG Pro, Namely, Oracle HCM Cloud, Ceridian Dayforce, Paycom, Paylocity, Rippling, HiBob, Personio, UKG Dimensions
Database	PostgreSQL, MySQL, MariaDB, SQL Server, Oracle
Custom	REST API, SCIM, CSV Import

What Makes aiSecurity UIDGuard360 Different

Legacy IAM / UEBA	Seceon aiSecurity UIDGuard360
Siloed views per source system	Single correlated identity across 40+ sources
Static, periodic access reviews	Continuous 100-pt risk scoring every 60 minutes

Legacy IAM / UEBA	Seceon aiSecurity UIDGuard360
Manual SOC ticketing for containment	9 automated playbooks with sub-minute response
Complex query languages for investigation	Natural-language MCP AI assistant

Ideal For

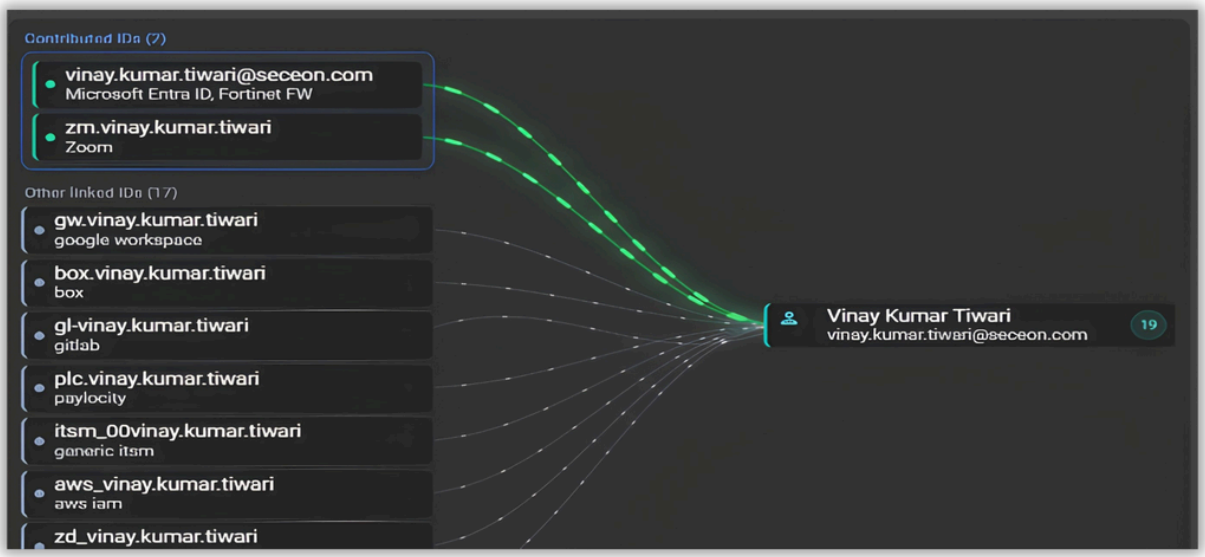
- **Enterprise SOC Teams:** stop chasing alerts across 40+ disconnected identity, cloud, and SaaS consoles. aiSecurity UIDGuard360 gives your analysts one risk-ranked queue so the riskiest identity in your environment is never buried in noise.
- **MSSPs:** grow your client book without growing headcount. One analyst team monitors, scores, and remediates identity risk across every tenant from a single multi-tenant pane of glass, so margins scale with you, not against you.
- **Regulated Industries (Finance, Healthcare, Gov):** walk into every audit with evidence already in hand. Continuous compliance risk scoring and audit-ready access reviews give you standing proof for SOX, HIPAA, and NIST identity controls, instead of a last-minute scramble.

aiSecurity UIDGuard360 in Action

A closer look at the analyst experience real-time posture scoring, cross-platform threat correlation, and identity-level investigation.

The aiSecurity UIDGuard360 Dashboard overall security posture, identity health, and connector status at a glance.

Threat Graph: correlating sources, severity, and targets to surface cross-platform attack patterns.



Identity context view: every contributed and linked account resolved back to a single real person.

aiSecurity UIDGuard360 brings fragmented identity data together, giving analysts a unified view of each identity, its accounts, applications, and access.

About Seceon

Seceon simplifies cybersecurity for MSPs, MSSPs, and IT teams by reducing risk and complexity. Our AI- and ML-powered aiSIEM and aiXDR platform provides comprehensive threat detection and response. By integrating data from logs, identity management, networks, endpoints, clouds, and applications, we deliver real-time, accurate alerts and automated remediation. Trusted by over 850 partners, Seceon supports more than 9,800 clients with efficient, high-margin security services and continuous compliance.
