

The Visibility Gap Between Identity and Action

The Identity Visibility Gap

Modern employees don't operate with a single identity. A single user can have dozens of accounts across cloud platforms, business applications, VPNs, databases, AI agents, and enterprise systems.

Most security tools can tell you who logged in, but they cannot tell you what happened next.

Why Organizations Are Struggling

- Security teams are forced to investigate users, accounts, devices, applications, and cloud activity separately.
- As identities continue to multiply, investigations become slower, insider threats become harder to detect, and critical business context is often lost.
- A single user can have **20+ to 40+ digital identities** spread across the organization.

*80% Faster Investigations
Complete User Context in Minutes
One Human. Every Identity. Every Action.*

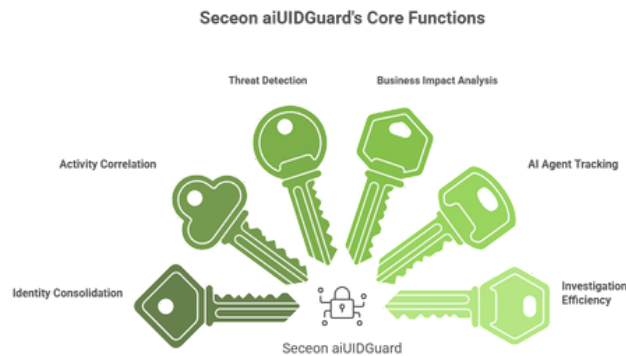

Introducing Seceon aiUIDGuard™

Seceon aiUIDGuard creates a real-time human-centric activity graph by connecting identities, applications, cloud activity, data access, AI agents, and business actions back to a single person.

Instead of investigating accounts in isolation, security teams gain complete visibility into the full activity lifecycle of every user across the organization.

How Seceon aiUIDGuard Helps

- Consolidate 40+ digital identities into a single human profile.
- Correlate activity across identities, applications, cloud, and data.
- Detect insider threats and account takeover faster.
- Understand business impact behind every user action.
- Track AI agent ownership, activity, and data access.
- Reduce investigation time from hours to minutes.

The Human Behind Every Alert

Seceon aiUIDGuard shifts investigations from accounts and events to the person behind them, providing the context needed to detect threats faster and understand their true business impact.
One Human. Every Identity. Every Action.
